

Add "openai/gpt-oss-120b" to the existing list

Ask : There are 3 models available under Select Model dropdown in the Settings tab. I want to add one more model. Analyze the code and provide me the class and function where i need to update the code

Output:

Where to update the model list

The dropdown is not built from a JavaScript class. It is built inside the main DOMContentLoaded setup in popup.js:100-170.

Exact place

- `const modelsByProvider = { ... }`
- `function updateModelOptions(provider) { ... }`

This is the code that defines the available models for each provider and populates the “Select Model” dropdown.

Example:

- `popup.js:108-141`

That section currently contains:

- `groq`
- `openai`
- `inceptionlabs`

and each one has an array of model objects like:

- `{ value: 'gpt-4o', label: 'GPT-4o' }`

To add one more model, add a new object to the relevant provider array, for example:

```
inceptionlabs: [  
  { value: 'mercury-2.5', label: 'Mercury 2.5' },  
  { value: 'mercury-2', label: 'Mercury 2' },  
  { value: 'mercury-edit', label: 'Mercury Edit' },  
  { value: 'your-new-model', label: 'Your New Model' }  
]
```

Supporting logic

The selected value is then saved/used in:

- `providerSelect.addEventListener('change', ...)`

- `modelSelect.addEventListener('change', ...)`

Also see:

- `popup.js:146-185`

This is the flow that stores the chosen model in `chrome.storage.sync`.

If cost display should also include the new model

You may also need to update:

- `pricing.js:1-34`

Specifically the `PRICING` object and `calculateCost()` function. Otherwise the model may appear in the dropdown, but cost estimation may show as N/A.

Summary

If you only want to add one more model to the dropdown, the exact place is:

- `popup.js:108-141`
 - `modelsByProvider`
 - `updateModelOptions(provider)`

If you want, I can next tell you exactly which provider array to edit for your specific model and the exact snippet to insert.

Agent:

Implement the "**openai/gpt-oss-120b**" model as a new one in the dropdown without impacting the existing implementations
